DETAILED ACTION

Election/Restrictions

1. Claims 15-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 11/20/06.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Ostreicher et al., U.S. Pat. No. 4,711,793.

Ostreicher et al., teach a polymer electrolyte membrane comprising a quaternized amine salt on a support matrix (col. 10, lines 11-18).

Thus, the claim is anticipated.

Allowable Subject Matter

4. Claims 2-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 1745

Applicant claims a fuel cell comprising a polymer electrolyte membrane comprising a quaternized amine salt on a support matrix. Applicant claims the quaternized amine salt is selected from the group consisting of a poly-4-vinylpyridinebisulfate, a poly-4-vinylpyridinebisulfate silica composite, and a combination thereof. Applicant claims wherein the support matrix is selected from the group consisting of a glass fiber matrix, a polybenzoxazole matrix, and a polybenzimidazole matrix.

The prior art of record does not disclose a fuel cell comprising a polymer electrolyte membrane comprising a quaternized amine salt on a support matrix. The prior art of record does not disclose the quaternized amine salt is selected from the group consisting of a poly-4-vinylpyridinebisulfate, a poly-4-vinylpyridinebisulfate silica composite, and a combination thereof. The prior art of record does not disclose the support matrix is selected from the group consisting of a glass fiber matrix, a polybenzoxazole matrix, and a polybenzimidazole matrix.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Burke Jr , U.S. Pat. No. 3,644,263, teach a polymer lattice comprising a quaternary ammonium.
